Quick Wins

May 22, 2025

This section details recommended fixes that are a “patch” upgrade distance, as defined by semantic versioning. The goal of this section is to surface non-breaking changes that remediates the largest total number of vulnerabilities.

No upgrades identified as Quick Wins.

0 packages met the criteria for this section.

High Priority

May 22, 2025

This section details High priority upgrades as determined by a proprietary scoring engine based on a number of attributes including EPSS score, exploit maturity, and reachability. Each recommended fix will include the nearest remediation for any CVE flagged as High Priority and all other CVE remediated by the upgrade. Please see a detailed description [here](#) for additional details.

No upgrades identified as High Priority.

0 packages met the criteria for this section.

Low Priority

May 22, 2025

This section details low priority upgrades as determined by a proprietary scoring engine based on a number of attributes including EPSS score, exploit maturity, and reachability. Each recommended fix will include the nearest remediation that remediates the largest total amount of low priority CVEs without introducing high or critical CVE. Please see a detailed description [here](#) for additional details.

No upgrades identified as Low Priority.

0 packages met the criteria for this section.

Outdated Dependencies

May 22, 2025

This section details dependencies that are X minor or major versions behind latest as determined by the Quality policy applied to the project.

No outdated dependencies identified.
